

Website Name: GamesOnGames

Description: GamesOnGames is a fun website where users can browse a wide variety of video games across multiple platforms including PC, Xbox, and PlayStation. Each game will have a dedicated page with detailed descriptions, cover art, and release dates. Users will be able to create a personalized wishlist by selecting their favorite games. The goal is to design the site using Flexbox for layout and responsive design so it looks great on both desktop and mobile devices. By the end of the project, the website will showcase how data can be stored, viewed, and edited through a user-friendly interface.

Page List

1. **Home** – Introduction to the site, welcome message, and featured/new games.
2. **Catalog** – A complete list of all games displayed in a grid with filtering options by genre or platform.
3. **Game Details** – A dedicated page for each game with cover image, description, price, and release date.
4. **Wishlist** – A section where users can add or remove games they want to save for later or potential purchase.
5. **About Us / Contact Us** – Background information about the website and a contact form for users to send messages.

Data Storage, Manipulation, and Viewing

The website will store a list of games with the following attributes:

- **GameID** (unique identifier)
- **Title**
- **Genre**
- **Platform** (PC, PlayStation, Xbox, Nintendo Switch, etc.)
- **Price**
- **Release Date**
- **Description**
- **Image** (cover art)

Users will be able to **view games** (catalog & detail pages) and **manipulate data** through actions like adding/removing games from their wishlist/cart. The administrator will be able to **add, edit, or delete game entries** in the catalog. User accounts with login functionality may be added to ensure only authorized users, such as the admin, can modify the database.
